Windows下的Python环境安装

在Windows 7的环境下对Python环境的设置可以如下:

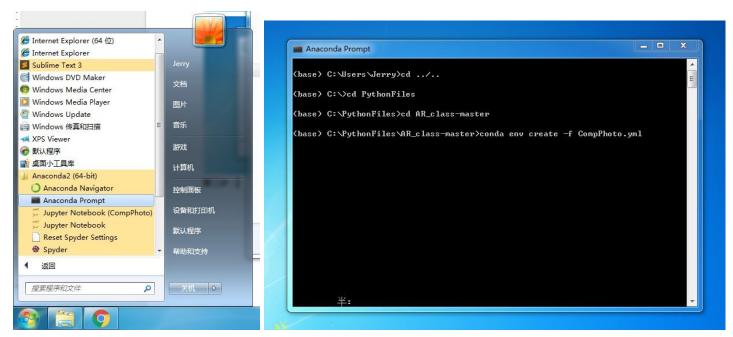

第一步:安装Python2.7版的Anaconda (https://www.anaconda.com/download/#windows),安装中的默认设置截图如下:

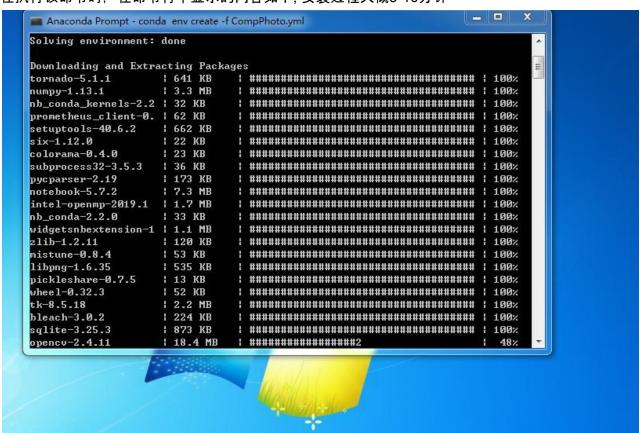

第二步: Anaconda安装成功之后,在github上下载更新过的代码 <u>https://github.com/ztliu62/AR_class</u> 并解压到文件夹

第三步:从开始菜单中打开Anaconda Prompt作为命令行,在其中输入命令导航到AR_class的目录下 并输入命令:conda env create -f CompPhoto.yml

在执行该命令时,在命令行中显示的内容如下,安装过程大概5-10分钟

安装完的结果会出现登入和登出环境的命令. 截图如下:

```
DEBUG MENUINSt_WIN3Z:create\3Z0/: 3NOrtcut cma is G:\Dsers\Jerry\Anaconaaz\pytno
n.exe, args are [u'C:\Wsers\\Jerry\\Anaconda2\\cwp.py', u'C:\Wsers\\Jerry\\Ana
conda2\\envs\\CompPhoto', u'C:\\Users\\Jerry\\Anaconda2\\envs\\CompPhoto\\python
.exe', u'C:\Wsers\\Jerry\Anaconda2\\envs\\CompPhoto\\Scripts\\jupyter-notebook
-script.py', u'xUSERPROFILEx'l
 Enabling nb_conda_kernels...
Status: enabled
done
 To activate this environment, use
#
     $ conda activate CompPhoto
 To deactivate an active environment, use
     $ conda deactivate
(base) C:\PythonFiles\AR_class-master>source activate CompPhoto
'source' 不是内部或外部命令,也不是可运行的程序
或批处理文件。
(base) C:\PythonFiles\AR_class-master>conda activate CompPhoto
```

按照激活环境的要求输入 conda activate CompPhoto之后就进入了激活的环境,命令行会以(CompPhoto)开头,可以通过以下命令来验证环境是否安装成功:

```
(CompPhoto) C:\PythonFiles\AR_class-master>python
Python 2.7.13 |Continuum Analytics, Inc.| (default, Dec 19 2016, 13:29:36) [MSC v.1500 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license" for more information.
Anaconda is brought to you by Continuum Analytics.
Please check out: http://continuum.io/thanks and https://anaconda.org
>>> import cv2
>>> exit()

(CompPhoto) C:\PythonFiles\AR_class-master>python envTestify.py
The Python version is 2.7.13
Successful Environment Setup!

(CompPhoto) C:\PythonFiles\AR_class-master>
```

输入python envTestify.py 后正常安装的环境会输出Python的版本信息和"Successful Environment Setup!"

在安装成功之后,就可以在环境中运行基于OpenCV的Python程序了
